Ashton Johnson

Williamstown, KY 41097
(859) 803-2393 | ashton.alisander@protonmail.com

OBJECTIVE

Seeking an entry-level IT internship to apply expertise in cloud computing, networking, and security technologies. Proficient in secure coding, web development, and deployment automation to enhance system reliability, streamline processes, and drive innovative cloud solutions while contributing to team success.

EDUCATION

Northern Kentucky University, Highland Heights, KY ***GPA: 3.974/4.0***

Bachelor of Science in Computer Information Technology – Cloud and Network Administration Track

Information Security Minor **Graduation***: May 2026*

Relevant Courses: *Cloud Computing | Scripting I | Network Security | Cybersecurity Fundamentals | Advanced Network and System Administration | Linux System Administration | Windows Administration | Introduction to Web Development*

PROJECTS

Network Security

Northern Kentucky University | Spring 2025

- Configured and hardened Cisco ASA firewalls using ACLs, NAT rules, and zone-based security policies to control DMZ and inside traffic.
- Implemented SYN flood protection with embryonic connection limits and TCP intercept thresholds to defend against DoS attacks.
- Built site-to-site VPNs and GRE over IPSec tunnels between routers, verifying encryption and session associations with CLI tools.
- Applied Layer 2 security on switches using DHCP snooping, BPDU Guard, and port security to block spoofing and starvation attacks.
- Developed access policies using object groups and role-based CLI views to support secure and scalable infrastructure.

Advanced Network & System Administration

Northern Kentucky University | Spring 2025

- Deployed and secured containerized applications using Docker, implementing network segmentation and security best practices.
- Configured WireGuard VPN for secure remote access and implemented a PfSense firewall to protect critical infrastructure.
- Integrated Linux systems with Active Directory, improving authentication management and security policies.
- Designed a containerized Wiki.js platform, ensuring scalable and secure long-term data storage.
- Conducted penetration testing on Docker networks, identifying and mitigating security vulnerabilities.

- Hosted and served HTML content via Apache on EC2 in a private subnet, automating deployment and internal DNS resolution using Route 53 and AWS CLI.
- Developed a containerized solution for data archiving, leveraging Docker to create a secure and scalable environment for long-term data storage.

Linux Administration
Northern Kentucky University | Fall 2024

- Developed custom system services (daemons) using systemd, improving automation and background process management.
- Automated user account management and network diagnostics with Bash scripting, streamlining administrative tasks.
- Installed and configured Docker to containerize Uptime Kuma for system monitoring and an Apache web server, optimizing resource utilization and security.
- Configured and managed firewalls to enforce security policies and protect network integrity.
- Managed and deployed virtual machines using KVM, optimizing system performance and resource allocation.
- Configured network interfaces and settings using Netplan to enhance connectivity.

Scripting I
Northern Kentucky University | Fall 2024

- Developed Python programs utilizing conditional statements, loops, and functions to enhance modularity and efficiency.
- Created Python scripts for file management, command-line interaction, and directory operations.
- Designed and implemented Python GUI applications, including a calculator and slope calculator.
- Built a text-based game in Python, showcasing logic development and user input handling.

TECHNICAL SKILLS

Cybersecurity and Cloud Technologies: AWS (CLI, EC2, S3, VPC), CloudFormation, Route 53 (Private Hosted Zones), ElastiCache (Memcached), Docker, Identity and Access Management, Cloud Security Compliance, Infrastructure Lifecycle Management, Apache Web Server Deployment

Infrastructure Security: Cisco ASA Firewall Configuration, VPN Setup (GRE/IPSec, IKE Phases), Syslog and NTP Configuration, Layer 2 Security (BPDU Guard, Port Security, DHCP Snooping), VPC and Network ACL Management, Secure Coding Practices

Automation & Programming: Bash & Python Scripting, HTML, CSS, JavaScript

IT Administration: Linux Administration, Web Server Administration, Network Administration, Windows Administration

OS Literacy: Linux (Ubuntu, Fedora, CentOS), Windows (10, 11, and Server 2022), MacOS
